

# Grant Utilization Proposal

This document outlines the plan to utilize the grant for supporting individuals in realizing the value of their education. The objective is to empower people by providing resources that bridge the gap between their education and meaningful careers. Here are the core areas of focus:

## **1. Career Guidance and Skill Development**

This program will provide guidance on career opportunities, offer skill development workshops, and connect people to mentors who can help them apply their education effectively in the job market.

## **2. Building an Online Learning Platform**

An accessible online platform will be created to offer affordable courses and practical skills training. The focus will be on bridging gaps between theoretical education and real-world applications.

## **3. Entrepreneurial Training and Funding**

This part of the program will focus on entrepreneurial skills, providing resources and small grants to help individuals start businesses or community-driven projects, applying their education in meaningful ways.

## **4. Mental Health and Motivation Support**

Mental health resources and motivational support will be provided to help individuals stay motivated and recognize their worth. This will help combat negative mindsets that can undermine the perceived value of education.
